

Adult-Content Platform Terms, Age-Verification, and AI-Content Policy Benchmark

Executive summary

This review prioritizes eighteen prominent or industry-significant adult-content services across tube/video, live-cam, subscription/creator, and clip-sale models. The strongest current policy evidence was available for **Fanvue, Fansly, ManyVids, Stripchat, and Chaturbate**; current operator/regulatory evidence was also available for **Pornhub, YouPorn, RedTube, OnlyFans, xHamster, XVideos, and XNXX**. Several adult sites actively resist automated retrieval of their legal pages, so I distinguish carefully between “**no AI clause located**” and “**AI policy not verifiable from the primary materials retrieved**.” Those are not the same conclusion.

Three materially different approaches to synthetic adult content are visible in the current market:

Fanvue is the clearest disclosure model. It expressly permits fully AI-generated content, deepfakes/face-swaps subject to verification rules, requires AI media to be clearly disclosed as artificial, provides profile-level AI tags, subjects AI content to a specific moderation test, prohibits AI subjects who resemble minors, and provides graduated sanctions including removal, earnings deductions, suspension, and permanent bans. ¹

Fansly has moved toward a restrictive authenticity model. Its July 2026 AI guidance incorporates Terms language prohibiting substantially AI-generated photorealistic/lifelike humans, deepfakes and face-swaps, unreviewed direct AI-to-user interaction, and AI material falsely presented as genuine human performance. Its creator onboarding separately requires adult status and identity verification. ²

ManyVids takes a consent/impersonation-centered approach. Its current terms expressly address AI-generated/deepfake material that misrepresents real people without consent, while its broader content rules require performer age/consent documentation, pre-publication review and continuing monitoring. ³

By contrast, in the current **Stripchat** and **Chaturbate** terms/guidelines reviewed, I did not locate an express clause using “artificial intelligence” or “deepfake.” Both nevertheless have comparatively mature controls around adult status, performer verification, consent, simulated/minor-looking content, proactive moderation and removal. Chaturbate’s terms are especially useful because they extend child-safety prohibitions to simulated/animated material and to filters, applications or automation that make an adult appear to be a minor. ⁴

The largest structural weakness across the market is therefore **not lack of traditional adult-safety rules; it is failure to connect those rules explicitly to synthetic media**. Age, consent, impersonation, nonconsensual intimate imagery, provenance, labels and moderation are often regulated in separate

clauses. A stronger modern policy should expressly say that all of those requirements apply equally to real, AI-generated, AI-enhanced, face-swapped, voice-cloned and otherwise synthetic sexual content.

Age assurance is simultaneously becoming much more consequential. In March 2026, European enforcement against Pornhub, Stripchat, XNXX and XVideos focused specifically on whether their age-assurance measures met Digital Services Act requirements; Pornhub's operator has separately restricted or changed access in markets such as the UK rather than simply relying on a click-through "18+" gate. ⁵ The UK's scrutiny of OnlyFans also demonstrates that regulators care not merely about having an age-estimation system but about how its threshold actually works and how accurately it is represented to regulators. ⁶

For a new website, the strongest policy architecture is therefore:

verified adults + verified depicted-person consent + explicit synthetic-media classification + prominent disclosure + absolute ban on minor/minor-looking synthetic sexual content + explicit real-person deepfake consent + rapid reporting/removal + graduated enforcement + auditable records.

All sources below were accessed **September 23, 2026**, unless otherwise indicated. This is a policy/compliance benchmark, not jurisdiction-specific legal advice.

Scope, prioritization, and research method

Prioritized platform set

The ranking below is a research-priority ranking rather than a purported exact September 2026 traffic ranking. I weighted global reach, regulatory importance, prominence in the adult creator economy, and usefulness as a policy benchmark.

Priority	Platform	Primary model	Main URL	Why included
1	Pornhub	User-uploaded tube/video	https://www.pornhub.com/	Global scale; Aylo flagship; major age-assurance and consent enforcement benchmark. ⁷
2	XVideos	User-uploaded tube/video	https://www.xvideos.com/	One of the four major adult services targeted by EU DSA age-assurance enforcement. ⁸
3	XNXX	User-uploaded tube/video	https://www.xnxx.com/	Same EU significance; operated by NKL Associates in the Czech Republic. ⁹

Priority	Platform	Primary model	Main URL	Why included
4	xHamster	Tube/ community video	https:// xhamster.com/	Major European-facing service; Hammy Media Ltd; subject to French age-access enforcement. ¹⁰
5	OnlyFans	Subscription creator platform	https:// onlyfans.com/	Dominant subscription-creator benchmark; operator Fenix has been directly scrutinized by Ofcom over age assurance. ⁶
6	Stripchat	Live cams	https:// stripchat.com/	Large live-cam service with detailed current KYC, consent, monitoring and enforcement rules. ¹¹
7	Chaturbate	Live cams	https:// chaturbate.com/	Mature performer verification, simulated-minor and reporting provisions; current terms retrieved. ¹²
8	Fansly	Subscription creator platform	https://fansly.com/	Particularly important because its 2026 Terms explicitly restrict generative-AI adult content. ¹³
9	ManyVids	Creator marketplace/ video	https:// www.manyvids.com/	Strong pre-publication moderation plus express AI/deepfake consent language. ¹⁴
10	Fanvue	Subscription creator platform	https:// www.fanvue.com/	Best-developed explicit AI-adult-content disclosure framework among the policies retrieved. ¹
11	YouPorn	User-uploaded tube/video	https:// www.youporn.com/	Aylo sister platform; group-level age-assurance changes apply alongside Pornhub and RedTube. ¹⁵
12	RedTube	User-uploaded tube/video	https:// www.redtube.com/	Aylo sister platform; same reason. ¹⁵

Priority	Platform	Primary model	Main URL	Why included
13	MyFreeCams	Live cams	https://www.myfreecams.com/	Long-standing industry-significant cam service; included for market coverage.
14	CamSoda	Live cams	https://www.camsoda.com/	Industry-significant live-cam comparator.
15	Clips4Sale	Clip marketplace	https://www.clips4sale.com/	Important specialized paid-clip marketplace.
16	FanCentro	Subscription creator platform	https://fancentro.com/	Established adult creator/subscription service.
17	JustForFans	Subscription creator platform	https://justfor.fans/	Adult-focused independent creator platform.
18	LoyalFans	Subscription creator platform	https://www.loyalfans.com/	Adult creator subscription/live-content comparator.

For the last six services, current primary policy text was not reliably extractable through the research interface. I therefore include them in the priority universe but deliberately mark policy fields as **unverified** rather than importing possibly stale clauses from third-party summaries. That distinction matters for a terms-and-conditions project: a stale or invented quotation is materially worse than an explicit evidence gap.

Evidence grading

I use three practical confidence levels:

A — primary/current: current platform terms, help-center, community guidelines or trust-and-safety material was retrieved directly.

B — authoritative external: current operator statement or regulator/government evidence was retrieved, but the service's current legal page itself could not be completely extracted.

C — watchlist: the platform belongs in a competitive benchmark, but current clause-level extraction requires a manual authenticated/direct-browser capture before using it as precedent.

This produces an important methodological point: **“not located” is not “permitted.”** For example, a platform may remove deepfakes under impersonation, consent or abuse rules even though its public terms do not use the word “AI.”

Platform-by-platform comparison

Core comparison matrix

Platform	Operator / jurisdiction verified in sources	Age and identity requirements	Explicit-content / performer rules	AI / synthetic-content position	Disclosure / labeling	Moderation / takedown / user upload
Pornhub	Aylo Freesites Ltd is identified as the Cyprus operator in EU proceedings. ⁹	Adult service; Aylo has changed or restricted access where local age-assurance law applies. In the UK, new access was restricted and verified/age-confirmed users received different treatment. ¹⁵	Pornhub's uploader process has required certification that depicted people were adults, consented to participation and disclosure, and that ID/\$2257 records were maintained. ¹⁶	No sufficiently current express AI clause retrieved. Nonconsensual synthetic sexual media should not be assumed permitted merely because "AI" was not located.	No AI-specific public label rule verified in retrieved primary materials.	Canadian privacy scrutiny for weaknesses relying on uploader consent assertion later Utah settlement imposed substantive content-safety obligation concerning child-abuse and nonconsensual material.
XVideos	WebGroup Czech Republic, Czech Republic. ⁹	EU enforcement in 2026 alleged inadequate effective/privacy-preserving age checks. ⁸	Current detailed upload clause was not safely retrievable.	AI policy unverified .	AI label rule unverified .	Subject to platform safety due to current specific takedown not extra ⁸

Platform	Operator / jurisdiction verified in sources	Age and identity requirements	Explicit-content / performer rules	AI / synthetic-content position	Disclosure / labeling	Moderation/takedown user upload
xNXX	NKL Associates, Czech Republic. ⁹	Same 2026 EU age-assurance enforcement cohort as Pornhub, Stripchat and XVideos. ⁸	Current detailed primary clause not extracted.	AI policy unverified .	AI label rule unverified .	Platform part of the same DS enforcement action; ex current internal workflow not extra ⁸
xHamster	Hammy Media Ltd, Cyprus, identified by the French regulator. ¹⁰	French authorities determined in August 2025 that the then-current access mechanism did not guarantee that only adults could reach pornography and ordered remedial measures. ¹⁰	Adult/pornographic service; present detailed performer/upload terms were not reliably extractable.	AI policy unverified .	AI label requirement unverified .	Current detailed takedown procedure safely extracted

Platform	Operator / jurisdiction verified in sources	Age and identity requirements	Explicit-content / performer rules	AI / synthetic-content position	Disclosure / labeling	Moderation/takedown user upload
OnlyFans	Fenix International Ltd; UK regulatory jurisdiction is demonstrated by Ofcom's enforcement. ¹⁹	18+ platform. Ofcom's case showed a material discrepancy between the age-challenge threshold Fenix described and the one actually configured; the threshold was subsequently increased. ⁶	Creator/participant verification is central to the service, but the current complete Acceptable Use Policy could not be reliably extracted in this session.	Current official AI wording not safely verified ; third-party summaries were excluded from the benchmark.	Therefore no current AI-label requirement is asserted here.	Platform moderation/complaint systems, but clause level work is withheld here because the official legal page is inaccessible/reliable extraction
Stripchat	Terms identify a Cyprus company; EU reporting identifies operator Technius Ltd. ²¹	Users/models must be adults; uploaders undergo government-ID plus selfie verification. False information or circumvention can lead to permanent blocking. ¹¹	Only verified persons may appear; consent and age documentation are required. Terms invoke \$2257 records for covered material. ²²	No explicit "AI/artificial intelligence/deepfake" clause located in the Terms and Community Guidelines reviewed.	No AI-specific labeling scheme located. General anti-deception rules prohibit passing prerecorded material off as live. ²³	Pre-moderation/proactive detection/computer vision/automated tools, 24/7 human moderation and reporting mechanisms are described. ¹¹

Platform	Operator / jurisdiction verified in sources	Age and identity requirements	Explicit-content / performer rules	AI / synthetic-content position	Disclosure / labeling	Moderation/takedown user upload
Chaturbate	Multi Media, LLC; Terms choose California law and Los Angeles County arbitration. ²⁴	Adults only; broadcasters provide a live selfie/video and unexpired government ID. Suspected minors can be reported to NCMEC/law enforcement. ²⁵	Strong simulated-minor rule: material includes simulated/animated depictions and adults made to appear underage; filters/applications/automation that create a minor appearance are captured. ²⁶	No express AI/deepfake term located in the current Terms search , but the automation/filter language already captures one important AI risk. ²⁶	No standalone AI label rule located.	Automated manual review and real-time monitoring of user reports are reviewed as soon as practicable and no later than four business days for nonconsensual material to be reported for expedited removal.
Fansly	Exact governing-law entity was not re-extracted from the accessible Terms text; current official Fansly Terms/help material was retrieved.	Terms state the service is not for minors and require users to be at least 18; creators must also be legal adults and complete identity verification, including government ID/selfie through the onboarding process. ²⁹	Adult content is contemplated, subject to Terms and creator/participant requirements.	Explicit restriction. Prohibits substantially AI-generated photorealistic/lifelike humans, including deepfakes/face-swaps; prohibits unsupervised user-facing AI interaction and misrepresentation of AI as authentic human performance. ³⁰	Rather than building a label-based safe harbor, the present policy largely removes deceptive/lifelike synthetic media from the permitted category. ³⁰	Creator identity verification via Onda policy violations lead to compliance action. ³¹

Platform	Operator / jurisdiction verified in sources	Age and identity requirements	Explicit-content / performer rules	AI / synthetic-content position	Disclosure / labeling	Moderation/takedown user upload
ManyVids	Current official terms/content-rule pages retrieved; governing-law jurisdiction was not re-extracted in the retrieved snippets.	Uploaders register with legal name, date of birth and government ID; co-performers must be adults and appropriately documented. ³²	Uploaders must own/license material and have relevant consents; detailed prohibited categories include underage and nonconsensual material. ³²	Explicit. AI/deepfake media may not misrepresent real individuals without consent; deepfake use that invades privacy or engages in misleading practices is restricted. ³³	The reviewed language focuses more on consent/misrepresentation than on a universal visible AI badge.	Particular strong: content is reviewed before publication and content to be monitored reports and enforcement are documented. ³⁴
Fanvue	Official Help Centre and legal-policy links retrieved; exact governing-law clause was not re-extracted.	18+; location-dependent age verification is triggered before accessing/searching NSFW material where legally required. Ondato may use selfie age estimation and, where necessary, government ID. ³⁵	NSFW content permitted subject to Acceptable Use Policy and Community Guidelines. AI subjects must not resemble or be intended to resemble minors. ³⁶	Explicit permission with safeguards. Fully AI-generated media is allowed; face-swaps/deepfakes are possible subject to verification/authorization restrictions. ³⁷	Strongest retrieved rule: AI must be clearly/prominently disclosed; profile bio, caption or media watermark may be used. AI creator accounts receive an AI tag in the profile. ¹	AI media undergo "Reasonable Person's" involving multiple moderation reporting account-suspension processes documented. ³⁸

Platform	Operator / jurisdiction verified in sources	Age and identity requirements	Explicit-content / performer rules	AI / synthetic-content position	Disclosure / labeling	Moderation / takedown / user upload
YouPorn	Aylo group; exact service-specific operating entity/ governing-law clause not re-extracted.	Aylo's UK statement expressly includes YouPorn among platforms whose access was restricted for new UK users, while previously verified users retained access. ¹⁵	Current site-specific upload language not extracted.	AI policy unverified.	AI disclosure rule unverified.	Aylo-level safeguards posture applies operationally but this may not equate to Pornhub's specific uploader clause automation with YouTube contract.
RedTube	Aylo group; exact service-specific jurisdiction not re-extracted.	Same current Aylo UK access change expressly includes RedTube. ¹⁵	Site-specific current clause not extracted.	AI policy unverified.	AI label rule unverified.	Group-level evidence
MyFreeCams	Not verified in the current source set.	Direct current clause extraction required before relying on its policy as precedent.	Same.	Unverified.	Unverified.	Unverified.
CamSoda	Not verified in the current source set.	Direct current clause extraction required.	Same.	Unverified.	Unverified.	Unverified.
Clips4Sale	Not verified in the current source set.	Direct current clause extraction required.	Same.	Unverified.	Unverified.	Unverified.

Platform	Operator / jurisdiction verified in sources	Age and identity requirements	Explicit-content / performer rules	AI / synthetic-content position	Disclosure / labeling	Moderation / takedown / user upload
FanCentro	Not verified in the current source set.	Direct current clause extraction required.	Same.	Unverified.	Unverified.	Unverified.
JustForFans	Not verified in the current source set.	Direct current clause extraction required.	Same.	Unverified.	Unverified.	Unverified.
LoyalFans	Not verified in the current source set.	Direct current clause extraction required.	Same.	Unverified.	Unverified.	Unverified.

The practical research takeaway is that the **first twelve services are the more defensible policy benchmark today**; the final six belong in a commercial watchlist, but their current legal documents should be manually saved and versioned before any clause is copied into a competitive-policy database.

Age assurance versus creator verification

One of the most important distinctions across these terms is between **viewer age assurance** and **creator/performer verification**.

Creator-side systems tend to be significantly stronger. Stripchat requires ID plus selfie for uploading and verification of depicted participants; Chaturbate requires broadcaster identity evidence; ManyVids requires uploader identity details and supporting performer records; Fansly requires government-ID-based creator onboarding. ⁴¹

Viewer-side controls are more fragmented and jurisdiction-specific. Fanvue provides an unusually transparent example: the basic contractual floor is 18+, while regulated locations trigger selfie age estimation and, where needed, government ID before NSFW access; Fanvue says it keeps an age-check result/timestamp rather than the selfie or ID image itself. ³⁵ Aylo, conversely, has chosen to restrict service availability in some jurisdictions while advocating device-level age assurance. ¹⁵

That difference matters when drafting: **“You must be 18” is an eligibility clause; it is not, by itself, an age-verification system.** European and UK enforcement trends show that regulated adult services increasingly need technical assurance rather than mere self-declaration. The 2026 EU proceedings against Pornhub, Stripchat, XNXX and XVideos are direct evidence of that regulatory direction. ⁸

Exact clause extracts and source record

Because of copyright limits and because policy benchmarking is safer when quotations remain tightly contextualized, the extracts below reproduce only the shortest operative language needed to show the rule. They are not substitutes for reading the complete policy.

Access date for every source below: September 23, 2026.

Platform / source	Exact operative wording	What the language establishes
Fanvue — “Is AI content allowed on Fanvue?” https://help.fanvue.com/en/articles/9538738-is-ai-content-allowed-on-fanvue	“you must disclose that it is not real and was generated using AI.” ³⁷	Direct, mandatory authenticity disclosure.
Fanvue — age verification https://help.fanvue.com/en/articles/14184584-age-verification-on-fanvue	“you must be at least 18 years of age.” ³⁵	Clean minimum-age statement backed by technical verification in covered regions.
Fansly — AI Generated Content on Fansly https://help.fansly.com/en/articles/12315578-ai-generated-content-on-fansly	“any content that misrepresents AI-generated material as authentic human performance or creation.” ³⁰	Deception/authenticity prohibition.
Fansly — Terms of Service https://fansly.com/tos	“Fansly contains adult oriented content and is not intended for minors.” ⁴²	Express adult-service framing.
ManyVids — Terms for Users & Members	“AI-generated or deepfake content that misrepresents real individuals without consent” ³³	Direct linkage of deepfakes to consent and impersonation.
ManyVids — Content Rules	“All content is subject to review prior to publication and ongoing monitoring” ⁴³	Pre-publication moderation plus post-publication surveillance.
Stripchat — Community Guidelines	“All models and users must be at least 18 years of age.” ²³	Clear adult-only baseline.

Platform / source	Exact operative wording	What the language establishes
Stripchat — Terms https://stripchat.com/terms	The current Terms require government-photo-ID/selfie verification for upload privileges and allow permanent blocking for identity-verification circumvention. ²²	Strong uploader KYC and anti-circumvention.
Chaturbate — Terms https://chaturbate.com/terms/	“The Chaturbate.com platform is only open to consenting adults” ²⁶	Concise age-and-consent framing.
Chaturbate — reporting provisions	Reports are to be reviewed promptly and, under the stated policy, within the platform's maximum four-business-day window. ⁴⁴	An unusually concrete moderation timetable.
Pornhub — uploader representations described by Canadian Privacy Commissioner	“were at least 18 years old at the time of production” ¹⁶	Depicted-person age representation; the same process also addressed consent/record keeping.
Pornhub / YouPorn / RedTube — Aylo UK statement https://www.aylo.com/newsroom/aylo-upgrades-age-assurance-methods-in-united-kingdom/	“New users in the UK will no longer be able to access Aylo's content sharing platforms” ¹⁵	Demonstrates that age-assurance compliance may be implemented through access restriction, not just an age gate.

For **OnlyFans**, **XVideos**, **XNXX**, **xHamster**, **MyFreeCams**, **CamSoda**, **Clips4Sale**, **FanCentro**, **JustForFans** and **LoyalFans**, I would not reproduce purported “exact T&C wording” from the materials available in this session. Either their current legal pages were inaccessible to reliable extraction or the evidence retrieved was regulatory rather than the contract itself. That is intentionally conservative: third-party copies of adult-platform terms can be several revisions behind the operative contract.

For OnlyFans, the authoritative evidence retrieved is instead Ofcom's investigation of Fenix's age-assurance representations and the resulting enforcement. ⁶ For xHamster, the strongest retrieved evidence is the French regulator's formal decision naming Hammy Media Ltd and addressing deficient minor-access controls. ¹⁰ For XVideos and XNXX, the most current authoritative evidence available here concerns their March 2026 DSA age-assurance proceedings. ⁸

This is also why policy versioning should form part of your own governance: save the HTML/PDF rendering, capture the effective date, calculate a hash, and retain prior versions whenever your adult-content or AI rules change. A database containing text without its version/effective date is weak evidence in a later user dispute.

Cross-platform patterns, gaps, and best-practice language

What the stronger platforms have in common

The most mature adult-platform policies separate **four different people or roles** that weaker terms tend to conflate:

The viewer must be an adult and, where law requires it, pass age assurance. Fanvue provides a particularly clear distinction between contractual adulthood and location-triggered verification; EU enforcement demonstrates why this distinction matters. ⁴⁵

The uploader/creator must be a verified adult. Stripchat, Chaturbate, Fansly and ManyVids all provide examples of creator-side identity controls beyond merely checking an “I am 18” box. ⁴⁶

Every depicted real person must also be an adult and must have consented. Importantly, the Canadian Privacy Commissioner's Pornhub investigation illustrates the risk of treating the uploader's bare assertion of third-party consent as sufficient proof. ¹⁶

A synthetic subject creates a fourth category. Fanvue, Fansly and ManyVids show three ways of handling it: permit with disclosure, restrict lifelike synthetic humans, or permit some synthetic uses while prohibiting nonconsensual impersonation. ⁴⁷

That fourth category should now be explicit in any new adult-content policy.

The major AI-policy gaps

The first gap is **undefined terminology**. “AI-generated” is often too crude. A useful policy should separately define:

AI-generated content — most or all perceptible sexual media is generated synthetically.

AI-enhanced content — real source media is materially changed by AI.

Synthetic impersonation/deepfake — a real person's face, body, voice, identity or recognizable likeness is generated or substituted.

AI interaction — a model generates personalized messages, images, audio or video for an individual user.

Fansly's policy is notable because it expressly addresses both synthetic media and autonomous personalized AI interaction, rather than treating “AI content” as only images. ³⁰

The second gap is **disclosure granularity**. Fanvue permits disclosure in a profile bio, content caption or watermark and separately uses an AI tag for AI creator accounts. ¹ That is materially stronger than merely requiring a creator to say somewhere in the Terms that they use AI. For paid adult media, the user should know the content is artificial **before purchase or meaningful interaction**, not after.

The third gap is **consent coverage**. A conventional performer release says “I consented to being filmed.” It may not clearly authorize generating new sexual situations, modifying the person's body, cloning their voice, or creating future synthetic scenes. ManyVids' express focus on nonconsensual real-person deepfakes is therefore a useful starting point, but an even stronger clause would require **specific authorization for synthetic sexual depiction**, separate from general performer consent. ³³

The fourth gap is **minor-like synthetic subjects**. Fanvue directly prohibits AI media that resembles or is intended to resemble someone under 18 and says prompt text is not sufficient proof of age. ³⁷ Chaturbate reaches a similar safety problem from the opposite direction by prohibiting simulated/animated child sexual material and adults altered through filters/applications/automation so as to present as minors. ²⁶ Those are both substantially stronger than a rule merely saying “real minors are prohibited.”

The fifth gap is **enforcement transparency**. ManyVids describes prepublication and continuing review; Stripchat describes automated plus human moderation; Fanvue spells out potential sanctions for AI-policy breaches; Chaturbate publishes a reporting review timeframe. ⁴⁸ A new platform should combine those approaches rather than relying solely on reactive takedowns.

Best-practice formulations distilled from the benchmark

For **adult-status conditions**, the strongest structure is not simply “18+ only.” It should say that access is limited to persons at least 18 **and at least the age of legal majority where higher**, that age assurance may be required before restricted content is displayed, that creators/performers undergo stronger identity verification, and that every identifiable real person depicted must separately be verified as an adult. Stripchat and Chaturbate provide useful examples of combining adult status with performer verification; Fanvue demonstrates location-sensitive viewer verification. ⁴⁹

For **AI-generated adult-content disclosure**, Fanvue offers the strongest retrieved disclosure concept: the notice must be clear/prominent and can operate at both profile and content level. ¹ I would strengthen it further by making the label mandatory at the point of purchase/viewing and distinguishing “AI-generated,” “AI-enhanced,” and “synthetic depiction of a verified real performer.”

For **combined clauses**, the best synthesis is Fanvue's disclosure/minor safeguards + Fansly's anti-deception and autonomous-AI restrictions + ManyVids' real-person consent principle + Chaturbate's minor-appearance rule + the traditional performer ID/consent structures of Stripchat and ManyVids. ⁵⁰

Regulatory overlay that should influence drafting

The policy benchmark should not be treated in isolation from current regulation.

The European Commission's 2026 AI-transparency framework makes marking and labeling of certain AI-generated/manipulated material, including deepfakes, a live compliance issue from **August 2, 2026**. Whether a particular adult website is itself a regulated AI “provider” or “deployer” depends on what AI systems it operates and how they are used; nevertheless, the regulatory direction strongly favors machine-readable provenance plus conspicuous human-facing disclosure rather than hidden boilerplate. ⁵¹

Separately, the EU's DSA scrutiny of Pornhub, Stripchat, XNXX and XVideos shows that adult-service age assurance is now an enforcement issue for major platforms rather than a theoretical best practice. ⁸

In the UK, the OnlyFans matter demonstrates a second risk: even sophisticated age-estimation systems create compliance exposure if actual thresholds, testing and representations to regulators do not match.

⁶ Aylo's UK response also shows that adult platforms may choose geographic restrictions where they do not accept the regulator's preferred site-level verification model. ¹⁵

Finally, consent needs to be an independent control rather than merely an uploader warranty. The Canadian Pornhub privacy investigation is particularly instructive on this point. ¹⁶

Recommended draft clauses

The following are original model clauses synthesized from the benchmark rather than copied from any platform. They should be adapted to the countries where your service is offered, your payment stack, the types of media you host, and whether you merely host user content or also generate synthetic media yourself.

Adult-content and age-verification clause

Adult Content; Age, Identity and Consent Requirements

The Service contains or may provide access to sexually explicit or otherwise age-restricted content and is intended solely for adults. You may access such content only if you are at least eighteen (18) years old and have reached the legal age of majority required to access such content in your jurisdiction, if that age is higher.

We may require age assurance or age verification before allowing access to age-restricted areas of the Service. Depending on applicable law and risk, this may include privacy-preserving age estimation, verification through a qualified third-party provider, government-issued identification, digital identity credentials, payment- or device-based age signals, or another legally permitted method. Circumventing or attempting to circumvent an age-verification or geographic-access control is prohibited.

Creators and uploaders of sexually explicit content must complete identity and age verification before publishing such content. Every real person who appears in sexually explicit content must have been at least eighteen (18) years old, and at least any higher applicable minimum age, at the time the content was created. The uploader must obtain and maintain legally sufficient evidence of that person's identity, age and informed consent to the creation and distribution of the content and must provide such evidence to us upon request.

Content involving a minor, a person reasonably appearing to be a minor, or the sexualization of a minor is strictly prohibited. This prohibition applies regardless of whether the content is photographic, filmed, illustrated, animated, AI-generated, AI-enhanced, face-swapped, digitally altered, fictional, simulated or otherwise synthetic.

We may review, restrict, remove or disable access to content, suspend publication pending verification, preserve relevant records, suspend or terminate accounts, withhold or reverse

payments where legally and contractually permitted, and report suspected unlawful content or conduct to competent authorities or designated child-safety organizations.

This incorporates the strongest characteristics seen in Fanvue's age-assurance model, Stripchat/Chaturbate's performer verification, and Chaturbate/Fanvue's treatment of minor-looking or synthetic subjects. ⁵²

AI-generated adult-content clause

AI-Generated, AI-Enhanced and Synthetic Adult Content

For purposes of these Terms, "Synthetic Content" includes content created or materially altered using artificial intelligence, machine learning or comparable technologies, including generated images or video, face swaps, deepfakes, voice clones, synthetic performers, AI-enhanced real-person media and personalized media generated by an automated system.

Synthetic Content may be uploaded only where expressly permitted by these Terms and applicable law. Any Synthetic Content that a reasonable user could mistake for authentic photography, video, audio, performance or communication must be clearly and prominently disclosed as artificial or materially AI-altered before the user views, purchases or interacts with it. We may require standardized labels such as **"AI-generated," "AI-enhanced," or "Synthetic depiction of a verified adult performer,"** together with machine-readable provenance or other metadata.

You may not use Synthetic Content to impersonate, sexually depict or materially reproduce the face, body, voice, identity or recognizable likeness of a real person unless that person is a verified adult and has given specific, informed and documented authorization for that particular category of synthetic sexual use. A general model release, permission to publish an original photograph, or the fact that source material is publicly available does not by itself constitute authorization to create synthetic sexual content.

Synthetic Content must never depict, represent, sexualize or intentionally resemble a person under eighteen (18), and must never use age-related descriptions, visual characteristics, context or presentation designed to cause a reasonable viewer to perceive the depicted person as a minor. A creator's prompt, caption or assertion that a synthetic subject is eighteen or older does not override the apparent age of the depicted subject.

Synthetic Content may not be used deceptively, including by representing a synthetic performer as a real person or representing an automated AI interaction as a personal human interaction where that distinction would reasonably affect a user's decision to purchase, subscribe or communicate.

You remain responsible for all intellectual-property, privacy, publicity, data-protection and consent rights associated with Synthetic Content. We may request source files, consent evidence, provenance records or other verification information and may remove or disable content while such review is pending.

Violations may result in labeling or distribution restrictions, removal, loss of monetization, withheld or reversed earnings where permitted, suspension, permanent termination and, where required or appropriate, referral to competent authorities.

This clause intentionally merges Fanvue's disclosure model, Fansly's anti-deception approach and ManyVids' real-person consent concept. ⁴⁷

Integrated adult-plus-AI clause

For a shorter Terms document, I would use this combined version:

Adult and Synthetic Sexual Content

The Service's age-restricted content is available only to persons who are at least eighteen (18) years old and have reached any higher age of legal majority required by applicable law. We may require age assurance before providing access, and creators of sexually explicit content must complete identity and age verification.

Every real person depicted in sexually explicit content must be a verified adult and must have knowingly and voluntarily consented to the creation and distribution of that content. Where a real person's face, body, voice, likeness or identity is used in AI-generated, AI-enhanced, face-swapped, deepfake or other synthetic sexual content, the uploader must also possess specific documented consent authorizing that synthetic use.

Synthetic or materially AI-altered media that could reasonably be mistaken for authentic media must be conspicuously identified as **AI-generated**, **AI-enhanced**, or otherwise synthetic at the point at which a user encounters or purchases it. Synthetic performers must not be falsely presented as real people, and automated AI interactions must not be falsely presented as personal human communications.

Sexual content involving or reasonably appearing to involve a person under eighteen (18) is prohibited in all forms, including real, simulated, animated, illustrated, AI-generated, AI-enhanced and digitally altered media. An age stated in a prompt, caption, profile or description does not establish that a depicted person reasonably appears to be an adult.

Impersonation, nonconsensual synthetic sexual depictions, unauthorized voice or likeness cloning, deceptive deepfakes, circumvention of age controls and falsification of identity or consent records are prohibited. We may conduct automated and human review before or after publication, request supporting records, restrict or remove content, suspend payments or accounts where permitted, permanently terminate repeat or serious violators, and report suspected unlawful activity as required by law.

This is the version I would favor operationally because it avoids the frequent industry mistake of putting age, real-performer consent and AI content in disconnected policies.

Implementation checklist and compliance risks

Implementation checklist

A workable policy needs matching product controls. The strongest terms in the benchmark are effective because they connect words to verification and moderation systems: Stripchat describes identity checks and ongoing monitoring; ManyVids describes prepublication review; Chaturbate describes live verification/reporting; Fanvue connects disclosure to actual AI profile tags. ⁵³

At account and access level, implement an 18+/legal-majority contractual gate, geolocation-based rules engine, and stronger age assurance before displaying restricted material wherever local law demands it. Do not treat a DOB field or “I am 18” checkbox as equivalent to verified age. Keep age-assurance data minimized: where feasible, retain an adult/pass result rather than copies of identity evidence, analogous to the privacy-oriented structure Fanvue describes for viewer verification. ³⁵

At creator onboarding, verify legal identity, adulthood and account ownership before allowing explicit-content uploads or monetization. Require every co-performer to be separately verified or linked to a verified consent record. Stripchat, Chaturbate, Fansly and ManyVids all demonstrate versions of this stronger creator-side model. ⁴⁶

At upload time, require structured declarations instead of a generic checkbox:

Real content / AI-enhanced / fully AI-generated / face-swap or deepfake / synthetic voice / other synthetic media.

For content using a real person's likeness, require a linked synthetic-use consent record. A normal content release should not silently double as permission for unlimited future deepfakes.

At display time, surface the AI status where the consumer makes the relevant decision: thumbnail/content page and, for an AI persona, the creator profile. Fanvue's combination of clear disclosure plus profile AI tag is the strongest current market precedent retrieved. ¹

At moderation time, use both prepublication controls for higher-risk uploads and continuing detection/reporting after publication. ManyVids' prepublication-plus-continuing-monitoring formulation and Stripchat's automated/human approach provide complementary models. ⁵⁴ Send suspected minor/minor-looking sexual content, nonconsensual deepfakes and identity/consent disputes to specialized high-priority queues rather than ordinary copyright/customer-support queues.

At enforcement time, use a documented ladder—label correction, rejection/removal, monetization restriction, temporary suspension, permanent termination—while reserving immediate permanent termination for child sexual exploitation, deliberate nonconsensual sexual impersonation, falsified performer IDs/consent, trafficking/coercion and similar severe violations. Fanvue and ManyVids provide examples of express graduated consequences, while Chaturbate expressly reserves immediate permanent enforcement for serious safety violations. ⁵⁵

At evidence level, retain policy version, acceptance timestamp, uploader identity/verification result, depicted-person consent status, content classification, AI disclosure state, moderator actions, complaint history and appeals. Keep actual identity documents segregated and for no longer than legally/operationally necessary.

Highest compliance risks

Age-assurance risk is now jurisdictionally acute. The EU's March 2026 action concerning Pornhub, Stripchat, XNXX and XVideos and the UK OnlyFans enforcement both demonstrate that merely claiming to operate an age control is not enough; effectiveness, configuration, privacy and regulatory representations matter. ⁵⁶ A globally available service therefore needs country/state-level feature flags rather than a single worldwide age gate.

Synthetic-minor risk should be treated as zero tolerance. Do not limit the prohibition to images of an identifiable real child. The strongest industry examples cover simulated, animated and digitally manipulated subjects and adults made to look underage; Fanvue additionally rejects AI subjects who reasonably resemble minors. ⁵⁷

Nonconsensual intimate imagery and deepfake risk is not solved by uploader attestation. The Pornhub privacy investigation illustrates why a platform may need stronger evidence that the person depicted actually consented, while ManyVids explicitly connects deepfake impersonation to consent. ⁵⁸ Your synthetic-content release should therefore distinguish consent to appear in original footage from consent to generate materially new sexual acts or situations.

AI-disclosure risk is increasing. EU AI-transparency rules applicable from August 2, 2026 include marking/labeling obligations concerning relevant synthetic and deepfake content for regulated providers/deployers. Whether your particular service falls into a given AI Act role requires a service-specific legal analysis, but hiding disclosure solely in Terms is becoming a poor design choice. ⁵¹ Visible labels plus machine-readable provenance are the safer architecture.

Privacy and biometric-data risk can conflict with age-assurance demands. The safest design is generally to make an external verifier answer the question “adult/not adult” without unnecessarily sending your platform the underlying selfie or identity document, where applicable law permits. Fanvue says its viewer-verification setup follows this result-oriented approach. ³⁵

Record-keeping risk is different from viewer age verification. Adult platforms such as Stripchat and Chaturbate separately place §2257-related record obligations on uploaders/producers for covered sexually explicit material. ⁵⁹ A U.S.-facing service should obtain specific counsel on its own producer/record-keeper status rather than assuming creator KYC alone satisfies every federal obligation.

Moderation latency is a contractual and safety risk. A platform that promises fast removal but lacks staffing or escalation tooling can create a second compliance problem. Chaturbate's published report-review timetable illustrates the value—and operational burden—of defining a concrete service standard. ⁴⁴ Internally, suspected minors, trafficking/coercion, nonconsensual sexual content and real-person deepfakes should receive materially faster escalation than ordinary Terms violations.

Policy ambiguity is itself a risk. In the reviewed current Stripchat and Chaturbate materials, strong age, consent and minor-appearance rules exist without a comparably explicit general AI/deepfake framework; the latter's filter/automation language partially closes the gap. ⁶⁰ A new website should not rely on moderators to infer that “consent,” “impersonation” and “minor” automatically cover every generative-AI use case. State that explicitly.

The strongest overall benchmark is therefore not any one platform. A more defensible 2026 policy combines **Fanvue's visible AI disclosure and minor-likeness safeguards, Fansly's anti-deception and autonomous-AI rules, ManyVids' deepfake-consent and prepublication-review language, Chaturbate's simulated-minor and reporting controls, and Stripchat's creator verification/continuous monitoring model.** ⁶¹
